

PROFILE

Junior Software Developer with hands-on expertise in Python OOP-based full stack development, RESTful API design, and SQL database management. Experienced in writing clean, well-documented code, participating in code reviews, and following software development lifecycle (SDLC) best practices. Familiar with Git version control, CI/CD pipelines, and functional/regression testing — eager to contribute to quality-driven, agile software teams.

EDUCATION

Jawaharlal Nehru National College of Engineering, Shivamogga Bengaluru, India
Bachelor of Engineering in Information Science & Engineering — VTU 2021 – 2025

- Relevant coursework: Data Structures & Algorithms, DBMS, OOP, Computer Networks, Software Engineering, Distributed Computing.

SKILLS

Programming:	Python, Java, JavaScript, SQL, HTML5/CSS3 — OOP design principles across all languages
Frameworks:	Django, Django REST Framework, Flask, Bootstrap, React.JS
Testing & QA:	Manual Testing, Functional Testing, Regression Testing, Integration Testing, Unit Testing, Selenium (familiar), JUnit (familiar), Test Documentation, Bug Tracking
DevOps & CI/CD:	Git, GitHub, Docker, Kubernetes, CI/CD Pipelines (TeamCity-compatible), AWS (EC2, S3, Lambda)
Databases:	MySQL, PostgreSQL, MongoDB, SQL Query Optimisation, Relational Schema Design
Tools:	VS Code, PyCharm, Postman, Jira, Linux
Practices:	SDLC, Agile/Scrum, Code Reviews, Clean Code, Test Planning, Defect Management

CERTIFICATIONS

- Full Stack Web Development – Skyllx Technologies (2025)
 - Data Analytics Job Simulation – Deloitte Australia via Forage (2025)
 - SQL and Relational Database Design – Online Certification (2023)
 - Git and Version Control Fundamentals – Online Certification (2023)
-

PROJECTS

Hospital Management System	Aug 2024 – Oct 2024
<i>Python · Django · MySQL · HTML5/CSS3 · Bootstrap · Git · AWS EC2</i>	
• Designed and coded a full-stack web application following SDLC best practices — covering requirements, architecture, development, testing, and deployment across 3 user-role tiers (admin, doctor, patient). • Wrote unit and functional test cases for all modules; tracked and resolved 10+ defects using structured bug documentation, reducing post-deployment issues by 40%. • Normalised MySQL schema with role-based access control and query optimisation, cutting page load time by 35%; maintained clean, well-commented codebase with Git version control throughout.	
Face Recognition Attendance System	2024
<i>Python · OOP · TensorFlow · OpenCV · MySQL · Flask · CI/CD</i>	
• Implemented new features and fixed bugs iteratively under code-review cycles; applied OOP design patterns for modular, maintainable code across data ingestion, model inference, and API layers. • Executed regression and integration test cases after each sprint, achieving 95%+ recognition accuracy with zero critical defects in production; maintained test documentation and validation logs. • Deployed via CI/CD pipeline; optimised MySQL schema with indexing for fast retrieval across 500+ records, reducing manual record-keeping by 80%.	

Indian Sign Language to Text Conversion

Feb 2025 – May 2025

Python · OOP · CNN · OpenCV · MediaPipe · scikit-learn · NLP · Flask

- Built and iteratively fine-tuned a CNN classifier on a 2,000-sample dataset; applied OOP principles to modularise preprocessing, feature extraction, and classification for maintainability.
- Performed functional and regression testing at each development stage; documented defects and improvements, achieving 90%+ gesture recognition accuracy at 24 FPS real-time throughput.
- Deployed via Flask with a browser-based interface; collaborated across development and QA phases to validate NLP post-processing output quality.

Finance Dashboard Web Application

2023

Django · Python · MySQL · JavaScript · Bootstrap · AWS EC2/S3 · Git

- Developed a full-stack application aggregating data from 3 REST API sources with real-time Chart.js visualisations; followed clean-code standards and participated in peer code reviews throughout.
 - Wrote and maintained SQL transaction models with query optimisation, reducing load time by 40%; executed integration and functional testing before each release to validate business logic.
-

ACHIEVEMENTS

- Delivered 5+ application modules at Skylx Technologies with zero critical regression bugs across 4 Agile sprint cycles — demonstrating consistent code quality and QA discipline.
- Resolved 15+ production defects, cutting average resolution time by 25% through structured bug-tracking, root-cause analysis, and systematic regression testing.
- Completed Python Full Stack certification covering Django, REST APIs, Docker, and Kubernetes — applied directly to all internship and capstone projects.
